

Neuroendoscopy

Khalid N Mayah

MBChB, FICMS, Neurosurgeon, Department of Neurosurgery, Al Sadir Teaching Hospital, Basrah; Iraq.

Introduction

Neuroendoscopy has been one of the fastest growing technologies in neurosurgery this decade. Just as in the fields of general surgery, gynecological surgery, orthopedic surgery, thoracic surgery, and urological surgery, neurosurgeons have been exploring this technology and adding indications for its use with increasing frequency over the past several years.

This article review of neuroendoscopy, described the techniques used, indications, their out come and complications encountered, although it is seems variable but at the end leads to same rules.
